

Bring your  
**Valve-Testing Equipment**  
 UP-TO-DATE  
 for all time!

BRITISH  
 MADE

The 'AVO' Valve Tester provides facilities available in no other similar instrument, but with the 'AVO' Universal Panel its scope and value are increased a hundredfold. Consider the tests shown on the right! Will your present equipment do ALL this? If not, you cannot adequately cope with the multiplicity of valve types in use to-day. Bring your equipment in line with to-day's—and the future's—demands. Own an 'AVO' Valve Tester and its Universal Panel, and you know that, whatever valve types the future may bring, your equipment cannot become obsolete.

**The 'AVO' UNIVERSAL PANEL**

- Any valve-holder in the panel instantly set up to accommodate any combination of electrode connections, standard or otherwise.
- Switch rollers numbered to conform with standard pin numbering. Each switch lettered and numbered to represent separate electrode connections. For any valve not in data book, test figures obtained from manufacturers' list.
- Separate systems of multi-electrode valves can be tested without removal from panel.

The 'AVO' Universal Panel (available independently of the 'AVO' Valve Tester) complete with Instructions and Valve Data Book. **3 Gns.** (Subject)

If you already use an 'AVO' Valve Tester the addition of this Universal Panel will bring your equipment up-to-date for all time.

The 'AVO' Valve Tester complete with Universal Valve Panel, Instructions and Valve Data Book. **12 Gns.** (Subject)

**The 'AVO' VALVE TESTER**  
 indicates:

Mutual Conductance direct in mA/V

- Tests at makers' specified electrode voltages.
- Coloured scale provided, indicating condition of valve as: Good, Indifferent or Replace.
- Tests Cathode/Heater Insulation under actual operating conditions.
- Measures Emission of Diodes and Rectifiers.
- Indicates filament continuity and electrode "shorts."

DEFERRED TERMS IF DESIRED.
