## More on the 3-Tube AC-Powered "Regen"

BY DOUGLAS D. FOX

*Communication through A.R.C. definitely pays off. Doug Fox's June article has led to considerably more information from no fewer than seven readers, and that's what we like to think A.R.C. is all about. (Editor)*

Thanks to a number of helpful A.R.C. readers, I am able to follow up my "A 3-Tube AC-Powered "Regen" article in the June 2003 issue with more information. I have learned that the radio is actually a Meissner 10-1193 "Three-Tube AC-DC Midget Receiver" manufactured by the Meissner Manufacturing Co. of Mt. Carmel, Illinois. It is a radio kit that was sold by Allied Radio, Layfayette Radio, World Radio Laboratories, and other dealers in the early 1940s. The design suggests that it may have been manufactured and sold by Meissner as early as 1937.

The schematic and wiring diagrams of the Meissner 10-1193 shown here are from the 1943 edition of the Meissner "How to Build" instruction manual. Also shown are the front and bottom view from my June 2003 article. My thanks to A.R.C. readers Tobie, Hyman, Bradish, Beam, Pennington, Hockman, and Ryan for the information, comments, and interest.
